IN THE ABSTRACT

Page 9, lines 2-14 have been amended as follows:

~~This invention provides a~~ A paintball gun anti-blocking device includes a first, ~~which is to set an~~ infra-red receiver and emitter ~~shooting means~~ disposed near the bottom of the ~~predetermined portion of the~~ inner wall of the gun tube to detect ~~if the lights on both~~ receiver and ~~shooting means are interconnecting~~ when the paintball enters the normal shooting position. A forming "OFF" status for the message of blocking of the paintball gun, while if both lights are blocked, it will form the message of "ON" meaning it is O.K. to shoot; meanwhile ~~second~~ an infra-red receiver and emitter ~~shooting means are settled on the upper and lower movement limit position of~~ positioned relative to the trigger as to detect if the trigger is pressed to ~~has completed to press~~ the shooting position, ~~while both lights are interconnecting, it forms the blocking message of "OFF" message, besides, when both lights are to be blocked, it then forms shoot able status of "ON"; by means of this to be the basis of actuate while the gun triggers the paintball when the paintball gun is shooting.~~
